DESCRIPTION

The Telecor CS-2 Call Station is designed for use with Telecor Administrative Communication Systems. The station is equipped with a pair of momentary action, push-button switches. The first one is for initiating normal calls to the Administrative Console. The second one is for initiating emergency calls.

The button cap colour of the Normal call switch is black and the Emergency call switch is red. The unit is inscribed with the words "Push to Call" on the stainless steel faceplate and each of the push-button switches are identified with the inscription "Normal" and "Emergency".

The CS-2 Call Station mounts onto a standard 1-gang electrical box, with 3 - 9/32" mounting centres.

ARCHITECT'S & ENGINEER'S SPECIFICATIONS

The Call Station shall be a Telecor model CS-2 or approved equal. It shall be equipped with two push-button switches. The first one shall be for placing routine calls to the Administrative Control Console. The second one shall be for placing Emergency calls. Calls shall be initiated by momentarily pressing either of the two push-buttons

The push-button switch used for placing routine calls shall be labeled "Normal" and utilize a black coloured button cap. The push-button used for placing emergency calls shall be labeled "Emergency" and utilize a red coloured button cap.

The unit shall be inscribed with the words "Push to Call" on the stainless steel faceplate and each of the push-button switches shall be identified with the inscription "Normal" and "Emergency".

The CS-2 Call Station components shall be mounted onto a single-gang, brushed, stainless steel plate. It shall be suitable for flush or surface mounting on a standard single-gang backbox with 3 - 9/32" mounting centres.
